

Hybrid Wood/Composite Mats for added stability

Bridgewell Mats is a producer and or supplier of wood mats, composite mats, steel rig mats and hybrid wood/composite mats. Our strategically-located stocking locations throughout the United States and Canada provide efficient distribution hubs to help with freight and timely delivery for your project needs.

Whether your specific needs call for large or small orders for crane support, pipeline jobs, temporary road access, trestle bridges or other applications, we can provide the product that meets your unique specifications and criteria.

PREMIUM PRODUCTS

Our Hybrid Wood/Composite Mat is manufactured as if making a standard 3ply laminated timber mat from either hardwood or Southern Yellow Pine boards depending on your weight requirements for your use. We then add a ½"x4'x8' solid high-density poly ethylene (HDPE) sheet to the top of the mat and use a carriage bolt to combine the two together. A diamond plate pattern is molded into the HDPE surface for better traction. If needed, lifting cables or chains can be added if requested.

These hybrid mats can be used in most matting applications of wind power, transmission lines, pipelines, marine, bridges, drill sites, barge work, environmental remediation and more.

HYBRID MAT SPECIFICATIONS:

- 8'x16' standard size; custom sizes available upon request
- 3-ply laminated mat with ½" x 4'x8'; solid HDPE sheets
- Hardwood timber boards or Southern Yellow Pine timber boards
- Diamond plate tread pattern surface for better traction
- Lifting cables and chains offered
